A Deviations from the Pre-Analysis Plan

As Rubenson, 2021 recommends, I include a list of deviations from the pre-analysis plan (PAP) as well as a justification for why those changes were made.

Research Question: The pre-registered research questions read: In an environment saturated with false information, is it possible to correct, or partially correct, inaccurate beliefs? More specifically, what effect does exposure to positive information about an election have on an individual's perception of electoral credibility? The questions listed in the introduction more accurately reflect what the experiment tested, specifically that the study dealt with exposure to factual information rather than fact-checking. Additionally, the questions in the introduction are worded more simply and accessibly.

Framing of the paper: Initially, this paper was to primarily be about correcting misinformation. As the paper progressed, it became more closely aligned to my first research question about institutional trust as well as the role of partisanship in mediating the relationship between information and perceptions of credibility. The questions asked in the survey did not directly address an individual's propensity to believe misinformation. Rather, they gauged the extent to which respondents trusted information presented (that varied in whether it was positive or neutral) and how exposure to this information impacted perceptions of electoral credibility. As a result, a story focusing on institutional trust and vote choice was more coherent than one that emphasized mental models and misinformation.

Addition of the PCA: I did not pre-register a PCA to analyze measures of trust. While conducting initial analyses of the data using an average of all of the measures of trust, the coefficients from the resulting regressions were not behaving in a way that made sense. After running the PCA, it became clear that the six measures of trust could be divided into two clear dimensions that had a strong theoretical justification. I therefore decided to use the

PCA in my analysis.

Sample Size: I pre-registered that my sample size would be 1000. In total, 1871 individuals responded to the survey. However, 871 did not fit the age requirements or demographic quotas and were filtered out before any analyses occurred and before they were able to answer questions after the demographic section.

B Demographic Information of Survey Respondents

Gender		Race/Ethnicity	
Number		Number	
Male	426	Asian	7
Female	445	Preto (Black)	99
Other	1	Indigenous	12
		Pardo (Mixed)	286

E Additional Information

The University of California, Los Angeles Human Research Protection Program approved this study (IRB# 22-001274).

E.1 Trust in Brazil

Source:

The AmericasBarometer by the LAPOP Lab, www.vanderbilt.edu/lapop

Note: Measures of trust were not asked every year.

by the LAPOP Lab, n.d.

E.2 Why Respondents Believed the Election to Be Credible or Not

In the final section of the survey, respondents were asked to three questions. First, they were asked who they planned to vote for in the 2022 election. Second, they were asked to what extent they perceived the election to be credible (primary outcome of interest) on a 1-6 Likert scale. Finally, they were asked why they gave the answer they did. Those who reported trusting the election (responding with a 4, 5, or 6) were shown a question asking why they *did* trust the election, while those who reported not trusting the election (responding with a 1, 2, or 3) were asked why they *did not* trust the election.

Regardless of whether individuals did or did not trust the election, they were asked to order a list of 6 reasons. These can be broken down into three main categories: institutional trust (trusting or not trusting the electoral court, electronic voting machines, or Brazilian elections in general), elite messaging (Lula or Bolsonaro said), and network messaging (a family member or friend said the election would or would not be credible or reading about the election’s credibility online). The count of respondents who listed each option in their top three is listed below, divided by those who did and did not trust the election.

Reasoning Among Those Who Trusted the Election

	Overall	Bolsonaro	Lula
Institutions	527	247	189
Elite	179	114	39
Network	207	123	59

Reasoning Among Those Who *Did Not* Trust the Election

	Overall	Bolsonaro	Lula
Institutions	224	129	23
Elite	94	43	13
Network	109	48	20

E.3 Believing and Sharing Information

Believing Information:

Individuals in the treatment group were exposed to both positive and neutral information about the election. Respondents were asked how accurate they believed the information to be. I took the averages of these scores across positive and neutral information. The T-tests for comparison are below.

Belief in Information

	Estimate	Mean Positive	Mean Neutral	P-value	CIs
Lula	-0.036	2.539	2.576	0.570	-0.163, 0.09
Bolsonaro	-0.413	1.815	2.228	0	-0.557, -0.27

Sharing Information:

After the headline questions in the experimental section, respondents were asked about their willingness to share the information they were viewing with no one, a small circle (private groupchat, family, or friends) or a large circle (anyone or on social media). Below are T-tests comparing Bolsonaro and Lula supporters' willingness to share information with each group size.

Willingness to Share Information Among Bolsonaro Supporters

Share With	Estimate	Mean Positive	Mean Neutral	P-value	CIs
No One	-0.061	0.327	0.388	0.191	-0.152, 0.03
Small Circle	-0.079	0.605	0.684	0.087	-0.17, 0.012
Big Circle	-0.117	0.402	0.519	0.015	-0.211, -0.023

Willingness to Share Information Among Lula Supporters

Share With	Estimate	Mean Positive	Mean Neutral	P-value	CIs
No One	-0.140	0.150	0.290	0.013	-0.251, -0.03
Small Circle	-0.009	0.664	0.673	0.885	-0.137, 0.118
Big Circle	-0.084	0.467	0.551	0.220	-0.219, 0.051

E.4 Survey Questions and Stimuli

E.4.1 Questions for the Treatment and Control Groups

Respondents in both the treatment and control groups saw identical prompting. They first read a series of headlines, answering two questions after each one. Then, respondents saw a series of mock Facebook posts and were asked one question after each one.

Introduction to the headline section: Nesta seção, você verá uma série de manchetes de jornais brasileiros respeitáveis. Por favor, leia cada manchete com cuidado e responda às perguntas. *(In this section, you will see a series of headlines from respected Brazilian newspapers. Please read each headline carefully and respond to the questions.)*

Questions asked after each headline:

1. Na sua opinião, qual é a precisão dessa manchete? *(In your opinion, how accurate is this headline?)*
 - (a) Muito precisa *(Very accurate)*
 - (b) Um pouco precisa *(Somewhat accurate)*

- (c) Um pouco imprecisa (*Somewhat inaccurate*)
- (d) Imprecisa (*Inaccurate*)
- (e) Não sei (*Don't know*)

Com quem é mais provável que você compartilhe esse artigo? (*With whom are you most likely to share this article?*)

1. Família (*Family*)
2. Amigos pessoalmente (*Friends, in person*)
3. Nas redes sociais (*On social media*)
4. Em um grupo de conversa privado (*In a private group chat*)
5. Qualquer pessoa (*With anyone*)
6. Ninguém (*With no one*)

Introduction to the mock post section: Nesta seção, você verá capturas de tela no Facebook de indivíduos compartilhando informações, Toda a informação é selecionada de fontes jornalísticas respeitáveis brasileiras. Obs: nomes, datas, e fotos de perfil foram removidas do post por razões de privacidade. Leia o post com cuidado e responda às perguntas. (*In this section, you will see screenshots from Facebook of individuals sharing information. All information is selected from reputable Brazilian journalistic sources. Note: names, dates, and profile pictures have been removed from the post for privacy reasons. Read the post carefully and answer the questions.*)

Question asked after each mock post:

1. Na sua opinião, qual é a precisão dessa manchete? (*In your opinion, how accurate is this headline?*)
 - (a) Muito precisa (*Very accurate*)
 - (b) Um pouco precisa (*Somewhat accurate*)
 - (c) Um pouco imprecisa (*Somewhat inaccurate*)
 - (d) Imprecisa (*Inaccurate*)
 - (e) Não sei (*Don't know*)

E.4.2 Headlines

Headlines used in both the control and treatment groups: The following headlines were the neutral headlines used in both the treatment and control groups. All respondents saw all of the following headlines.

- Headlines:
 - "Mais de 156,45 milhões de pessoas estão aptas a votar em outubro"
 - "Veja as fotos dos candidatos à Presidência que serão exibidas nas urnas"
 - "Apoio de artistas pode ser fundamental e ter peso maior do que em outras eleições, diz pesquisadora"
- Headlines in the form of mock posts:
 - Eleições 2022: Secretários de saúde vão entregar carta a candidatos com pedido de mais recursos para a área
 - Eleições 2022: Confira datas e informações sobre título, biometria e local de votação
 - Saiba quem são os candidatos à Presidência nas eleições 2022

Additional headlines in the treatment group: The following headlines were the positive headlines used in the treatment. In addition to the headlines above, the treatment group also saw the following headlines and mock posts.

- Headlines:
 - ”Fachin defende urnas e se opõe às fake news em mensagem para mobilização de 11 de agosto”
 - ”Procuradores divulgam carta a favor das urnas e liberdade de expressão”
- Headlines in the form of mock posts:
 - ”É falso que TSE tem 32 mil urnas grampeadas com o objetivo de fraudar a eleição”
 - ”Em pesquisa do Datafolha, 79% dos entrevistados dizem confiar nas urnas eletrônicas”
 - ”Saiba por que o voto eletrônico é seguro em nova série de vídeos sobre eleições de 2022”

E.4.3 Outcome Measures

1. A votação sugere que a eleição de 2022 tem uma grande possibilidade do segundo turno ser entre Luiz Inácio Lula da Silva e Jair Bolsonaro. Se o segundo turno fosse hoje, quem é mais provável que receba seu voto? (*Polling suggests that the 2022 election has a high probability of a runoff between Luiz Inácio Lula da Silva and Jair Bolsonaro. If the runoff were held today, who is more likely to receive your vote?*)
 - (a) Luiz Inácio Lula da Silva
 - (b) Jair Bolsonaro
 - (c) Não sei (*Don't know*)
 - (d) Prefiro não falar (*Prefer not to say*)

2. Se o segundo turno fosse hoje, qual seria seu grau de confiança nos resultados? (*If the second round were held today, how confident would you be in the results?*)

- (a) 1 (Não confio) (*No trust*)
- (b) 2
- (c) 3
- (d) 4
- (e) 5
- (f) 6 (Confio muito) (*A lot of trust*)

If respondents selected 1-3, implying they do not trust the election, they saw the following question: Abaixo estão as razões pelas quais alguém poderia acreditar que a eleição não é confiável. Por favor, coloque em ordem as razões abaixo justificando o porquê você respondeu dessa maneira na última pergunta. A razão que você concorda completamente será a primeira, e a razão que você discorda totalmente será a última. (*Below are reasons why someone might believe the election is unreliable. Please put the reasons below in order, justifying why you answered that way in the last question. The reason you completely agree with will be first, and the reason you completely disagree with will be last.*)

- (a) Bolsonaro disse (*Bolsonaro said*)
- (b) Lula disse (*Lula said*)
- (c) Eu li na internet (*I read it on the internet*)
- (d) Meu amigo ou minha família me falou (*My friend or family told me*)
- (e) Não confio no Tribunal Superior Eleitoral (TSE) (*I don't trust the Superior Electoral Court*)
- (f) Não confio no sistema eletrônico de votação (*I don't trust the electronic voting system*)

(g) Nunca confio nas eleições no Brasil (*I don't trust Brazilian elections*)

If respondents selected 4-6, implying they trust the election, they say the following question: Abaixo estão as razões pelas quais alguém poderia acreditar que a eleição é confiável. Por favor, coloque em ordem as razões abaixo justificando o porquê você respondeu dessa maneira na última pergunta. A razão que você concorda completamente será a primeira, e a razão que você discorda totalmente será a última. (Below are reasons why someone might believe the election is trustworthy. Please put the reasons below in order, justifying why you answered the last question the way you did. The reason you completely agree with will be first, and the reason you completely disagree with will be last.)

(a) Bolsonaro disse (*Bolsonaro said*)

(b) Lula disse (*Lula said*)

(c) Eu li na internet (*I read it on the internet*)

(d) Meu amigo ou minha família me falou (*My friend or family told me*)

(e) Confio no Tribunal Superior Eleitoral (TSE) (*I trust the Superior Electoral Court*)

(f) Confio no sistema eletrônico de votação (*I trust the electronic voting system*)

(g) Confio nas eleições no Brasil (*I trust Brazilian elections*)

(h) Sempre confio nas nossas eleições* (*I always trust our elections*)

*This option was unintentionally left in the final version of the survey. For analysis, I combined it with the response "I trust Brazilian elections" as they are both too similar to distinguish from one another.
